

CONFIGURE YOUR MAP VIEW TO FIT YOUR ORGANIZATION

New GIS Overlay capabilities from Titan GPS allow you to determine how you see your dashboard. Upload custom shape files and leverage web map services to get a true view of your area of operations, overlaid directly onto the Titan GPS mapping dashboard for full visibility into your tracked assets and their status relative to important points of interest for your organization.

With no file size restrictions and support for ESRI and open-source web map services, you can configure your mapping dashboard to see anything from real-time weather patterns to boundary delineations and detailed points like fire halls, hydrants, and more.

Key Features

- Simple file upload process
- Supported on Titan GPS web and mobile
- No shapefile size restrictions

PRIMARY BENEFITS

- Detailed map views with asset insight on one platform
- Provides more visibility into the areas that matter to you
- Detailed data points for special areas
